

RADIATION ONCOLOGY PROFILE

GENERAL INFORMATION

(Source: Royal College and Pathway Evaluation Program)

Radiation oncologists are medical specialists with unique knowledge, understanding and expertise in the diagnosis and care of patients with malignant disease. They are integrally involved in the formulation and execution of the management plan of cancer patients and therefore require specific knowledge and skills in the application of ionizing radiations to cancer treatment. Using an evidence-based approach, they are responsible for the appropriate recommendation, prescription and supervision of therapeutic ionizing radiation. The competent and ethical discharge of these responsibilities results in improved quality of life and/or survival for cancer patients, which in turn benefits families, society and future care.

Typically, a radiation oncologist practices in a multidisciplinary fashion in close collaboration with general and subspecialty surgeons, medical and gynecological oncologists. Ambulatory patient care is the norm. Cancer centres are generally located in large cities within academic health science centres, thus most radiation oncologists should expect to have an academic career.

RADIATION ONCOLOGY PROFILE

Upon completion of medical school, to become certified in radiation oncology requires an additional 5 years of Royal College-approved residency training. This training includes:

- 1 year of approved basic clinical training to introduce and expose the trainee to independent responsibility for decisions involving clinical judgment skills, the further development of an effective, and mature physician-patient relationship, and the achievement of competence in primary technical skills across a broad range of medical practice. The first year of an approved family medicine program is acceptable in fulfillment of this requirement.
- 3 years of approved residency training in radiation oncology, 1 year of which must include: 6 months of approved residency training in internal medicine, which may include up to three months of hematology/oncology; and 6 months of approved training in clinical training, basic science, or research training.
