GENERAL INFORMATION

Occupational Medicine is that branch of medicine that emphasizes prevention, and deals clinically and administratively with the health needs of both individuals and groups with respect to their working environments and includes the recognition, evaluation, control, management and rehabilitation of occupationally related diseases and injuries, and other conditions affecting ability to work.

Occupational Medicine aims to:
• Promote and maintain the highest degree of physical, mental and social well being of workers in all occupations;
• Prevent health problems caused by working conditions;
• Place and maintain workers in occupational environments compatible with their physical and psychological capabilities.
GENERAL INFORMATION

Upon completion of training, a resident is expected to be a competent subspecialist in Occupational Medicine capable of assuming a consultant’s role in the subspecialty. The resident must acquire a working knowledge of the theoretical basis of the subspecialty, including its foundations in the basic medical sciences and research.

Only candidates certified by the Royal College of Physicians and Surgeons of Canada in Internal Medicine or Public Health & Preventive Medicine may be eligible for certification in Occupational Medicine. Residents must demonstrate the requisite knowledge, skills, and attitudes for effective patient-centred care and service to a diverse population. In all aspects of specialist practice, the graduate must be able to address issues of gender, sexual orientation, age, culture, ethnicity and ethics in a professional manner.

Occupational med became a sub-specialty in 2006 and the following schools offer programs in that discipline: University of Alberta, University of Toronto, Université de Montréal.

GENERAL INFORMATION

Internal Medicine route
• Royal College certification in Internal Medicine or enrollment in a Royal College accredited program in Internal Medicine.
• Three years of primary specialty training must be completed before entering Occupational Medicine.
• All candidates must be certified in Internal Medicine in order to be eligible to write the Royal College certification examination in Occupational Medicine.
• Two (2) years of approved residency in Occupational Medicine, a maximum of one (1) year of which may be undertaken at the fourth year residency level during training for certification in Internal Medicine.

Public Health and Preventive Medicine route
• Five (5) years of Public Health and Preventive Medicine training must be completed before entering Occupational Medicine.
• All candidates must be certified in Public Health and Preventive Medicine in order to be eligible to write the Royal College certification examination in Occupational Medicine.
• This must include two (2) years of clinical training in a supervised setting appropriate for Occupational Medicine.
