General information

The study and practice of cardiology involves a wide range of patient care activities including: basic physical examinations; preventive health; and the diagnosis and management of cardiovascular disease through non-invasive treatment modalities or sophisticated interventions. They often see patients in a consultative role, but most of their patient involvement is long-term and ongoing.

Cardiologists are highly specialized practitioners in a dynamic field who place a premium on mastery and competence. They use their hands for invasive procedures and other manual tasks, but they also apply cognitive skills to the physical exam and other diagnostic procedures. Their daily tasks are diverse. With the pace of new developments (both in medical technology and in broader treatment trends) a high level of challenge and diversity, as well as significant intellectual demands are associated with this specialty.

General information

Cardiologists are expected to act as consultants in cardiovascular disease to all branches of medicine and pediatrics. They must be proficient in the management of acute coronary care problems, participate in the medical and surgical therapy of coronary artery disease and deal with the pre- and post-operative evaluation of cardiac surgical cases. This specialist must deal with cardiovascular problems associated with hypertensive, rheumatic and congenital heart disease and with cardiomyopathies.

A physician may choose whether to specialize in adult or pediatric cardiology. Upon completion of medical school, to become certified in adult cardiology it requires an additional 6-7 years of Royal College-approved residency training.

General information

Training includes:

- Royal College certification in internal medicine (4 years);
- 3 years of Royal College-approved adult cardiology training that must include rotations in: a clinical residency (acute cardiac care, clinical cardiology, including cardiology CTU and consultation); ambulatory cardiology (may be done longitudinally); pediatric cardiology (which may include adult and congenital heart disease); and a laboratory-based residency (cardiac catheterization, echocardiography, electrophysiology/pacemaker, ECG/ambulatory ECG monitoring/exercise stress testing, nuclear cardiology and an additional elective) research (clinical and/or basic).

For further details on training requirements please go to:

Hours worked per week (excluding on-call), 2019

Activity	Hours worked per week
Direct patient care without teaching component	24.6
Direct patient care with teaching component	9.4
Teaching without patient care	1.8
Indirect patient care	6.6
Health facility committees	1.3
Administration	4.1
Research	3.7
Managing practice	1.6
Continued professional development	2.9
Other	0.9
TOTAL HOURS PER WEEK	56.9

On-call duty hours per month, 2019

- 85% provide on-call services
- On-call hours = 92 hours/month
- On-call hours spent in direct patient care = 41 hours/ month

Percentage by remuneration method

Primary payment method¹ in 2017

Average gross payment per physician for Cardiology in 2017/18 (those earning at least \$60,000) = \$625,455²

Average percent overhead reported by Cardiology specialists in 2017 = 23%³

* Other includes capitation, sessional, contract or other method
