GENERAL INFORMATION

Medical oncology is a subspecialty of internal medicine, is closely associated with hematology and deals with tumors occurring in all organ systems. It is a varied, multidisciplinary field involving all aspects of internal medicine and requiring clinical knowledge and skills. The discipline treats the “whole” patient. Oncologists maintain close patient contact and their patients are often seriously or terminally ill. Systemic therapy provides curative treatment for a large number of patients. Research and teaching opportunities are plentiful in this field.

The medical oncologist often coordinates the multidisciplinary care of cancer patients, including diagnosis, therapy (e.g., surgery, chemotherapy, radiotherapy and other modalities), physiotherapy, counseling, clinical genetics, palliative care and ethical questions surrounding cancer care. It also involves screening efforts for both populations and of the relatives of patients in types of cancer that are thought to have a hereditary basis such as breast cancer.

GENERAL INFORMATION

A medical oncologist often has to liaise with pathologists on the exact biological nature of the tumor that is being treated.

The medical oncology resident must acquire a high degree of clinical competence in the investigation and management of patients with the spectrum of neoplastic diseases and their complications. They must incorporate an understanding of the basic scientific principles which relate to cancer and its treatment, particularly the chemical, hormonal and immunologic approaches. The resident must develop the ability to function as a specialist consultant in an inpatient and ambulatory setting and as a part of a multidisciplinary team in cancer management. Development of expertise in the relevant investigative methods, technical skills and communicative interpersonal relationships is essential, together with skill in the collection and interpretation of data and decision-making.

Only candidates certified by the Royal College of Physicians and Surgeons of Canada in internal medicine may be eligible for the Certificate of Special Competence in medical oncology.

GENERAL INFORMATION

Once certified in internal medicine, there is an additional 2 years of approved residency in medical oncology. This period must include:

- 1 year of approved clinical residency in an accredited residency program in medical oncology;
- 3 months approved residency on a radiation oncology service;
- 3 months approved residency on a hematology service unless equivalent training has been received previously.

It must also include a period of residency approved by the program director on other services which may treat specific tumor types or other aspects not otherwise included in the program.

For further details on training requirements please go to:
